He starts his article by explaining what a Race condition is with a code example and a short explanation on how that works.

His problem cases are simple yet aptly for the given task. He shows code examples of how it could work and how their race conditions could be fixed.

He has some errors in his English here and there, but other than that he wrote a good article that explains what a race condition is, how it could be bad to an application and how to fix it.

If I had to point out something he could have done differently, I'd point out that he should stick with one language instead of writing the text in English and the code examples partially in Norwegian.
