

# Review of obligatory assignment 02\_110074\_Authen.pdf

by Urs Oberdorf, 141627.

Mats did a really good job on this assignment. He has a well written introduction to the topic and deeps in on 2 cases how race condition vulnerabilities happen and how to fix them in these cases. The following critic points are only to polish it a little bit.

If the text points to parts of the example program, it makes itself more readable if it is written in the same font (In 1.2, right under the example you refere to `if` ) or a reference to the line number is included.

I think that you have written the whole assignment by heart but at some point you have learned it from a lecture, a book or so and it should be referenced.

Nevertheless it fulfills the task so this assignment **PASSED**.
