

Review of mandatory assignment 2

This is a review for the rapport "Race Conditions" from the subject software security by Tommy Ingdal aka 02_120913_Ingdal.pdf

The Review

The rapport was well written and how you built up the rapport is good. The language was good and the content was very understandable and explained well. The rapport is off to a great start, where you introduce Race Conditions in a good matter. The rapport in its whole, contains two good explained examples for a Race Conditions that can occur in an E-voting system and for user login. I really like that you have taken your time to make some code examples for both of your Race Conditions examples and that makes it easier to understand how it can occur. You have introduced some good solutions and it is also here very nice to see that you show some more code, as an example on how it can be implemented. The only thing I feel that could be a little more explained, is the different parts of the solution, but also the effect that these different Race Conditions have. It is good that you have added the sources that you have used to make this rapport.

Conclusion

All in all I think this is a very good rapport and I feel that you have answered the assignment in a good matter. All the requirements demanded for this assignment is fulfilled, so good job. I will give you the grade **PASS**
