

Review of 01\_120505\_Nilsen  
By Tommy André Evensen

Joachim Nilsen decided to write about trusted path in Solaris OS. I feel the mechanism is described well and its understandable to a knowledgeable reader. He brought the windows example which makes the task more understandable, and he is very good to refer for a quote. The format for the task is very beautiful and the reference list includes a lot of litteratur. It seems that Joachim have done a lot of research and is well informed.

I somehow feel the task is a little short as he did not focus that much on Solaris as over half of the task was examples from Linux and Windows. But then again, the quality of the text is that good that i feel its passable for this assignment.
