

Review of Assignment 2 - Software Security

Reviewer: David Vierheilig Review of: Jan Kerkenhoff

Jan showed race conditions in electronic id solution at the example of electronic passenger identification system for trains.

First he made a definition what race conditions are. He describes two possible examples in which race conditions can occur and he shows which counter measures can be done to prevent race conditions.

You used no references, in the future, it might be helpful to use references to corroborate your statements.

Generally speaking it was a good assignment and I would say it is PASSED.
