

Review of mandatory assignment 1

This is a review made for the rapport "Trusted Path Execution in Linux" from the subject software security by Victor Rudolfsson aka 01_120912.Rudolfsson.pdf

- By: Jan Petter Berg Nilsen
- Data: 09.09.2014

The Review

The rapport was well written and it comes from a dyslexic perspective. The language was good and the content was very understandable and explained well, even the complicated parts. The beginning of the rapport gives a good overview of what Trusted Path Execution(TPE) is and how TPE is in Linux. It also makes for a good foundation, when you start to dig deep into how grsecurity is implemented and how it works in Linux. The only thing i feel is missing from your explanation on TPE, is that you could have written more about the other various parts that make Trusted path in Linux, possible. The references are good, but I don't know how good your github references are, compared to other references that are out there on TPE, so maybe look into that next time. Besides that, the sources do match the content in the text.

Conclusion

I feel that you have answered the assignment in a good matter and you have done what the requirements demanded form this assignment, so good job. Your grade will be a pass, so have a nice day! :D
