Review

David Vierheilig wrote the assignment about trusted path in Linux. In my opinion the mechanism of trusted path is explained in a good way. I think the used examples are good, to understand the mechanism of the secure attention key and the trusted path execution better. But sometimes it was a little bit hard to follow the text, in cause of the language was sometimes confusing. David used lot of sources which is good.

All in all I think the assignment is passed well.

Grade: **pass**
