

Review Assignment #2 Katrine Borge : PASSED

A good introduction to what race conditions is how they occur is a nice start for this assignment and a code example, but for my taste a tad small. I agree on the claim that race condition might not happen even after 1000 iterations, but this near random.

Im a tad confused over your voting example as this I think it would be possible to put line 3-5 on the same line as this: `setVotes(getVotes(option)+1);` else I the examples good and explanatory for raceconditions in an E-voting system.

Overall an okay assignment
