REVIEW OF:

"A Secure E-voting System" by Eirik Vestreng Solberg

Reviewed by:

1 Review

The article addresses a detailed scenario with an electronic id solution implemented.

Solberg does not present two or more possible race conditions and the threat that is presented could have been described a little more. However, the countermeasures presented are in-depth and detailed enough to cover most of what the assignment asked for.

Some sources to validate that the countermeasures works, would also improve the overall impression of the article.
