Review of: 01_140153_Nesslinger

Assignment

Choose an operating system, not Windows, and describe how does it implement the concept of trusted path execution (TPE).

Review

It seems that you have read a lot of material about TPE to write the assignment, however, it lacks technical explanation, everything looks too superficial across the whole text.

The initial explanation looks a bit confusing in comparison with the "official" definition of TPE.

Your references match what you wrote, and you have the bonus of having an article on your references, but I was not able to download and read it.

Mark: Fail
