Review

In this assignment you have explained possible race conditions in a fictional
e-voting system and when a user logs into a system.
The first example is good and well explained. It's clear that you understand
what a race condition is, and how it works behind the scenes.
However, you have not included a code example which I think is mandatory
with this kind of assignment.

Your second example is thin and you haven't included any form of code
examples or figures which is a huge minus. Your explanation however is
correct, so you understand how a race condition may occur and how to
mitigate this kind of problem when dealing with user logins.

Overall the paper is OK, but certain aspects (e.g code examples) are missing.
You have also included two good references.
And even though this assignment are missing certain aspects that I think
should have been included, I will give you a pass on this one.
